

NOON AESTHETICS™

An Innovative Approach
to Highly Effective,
Safe & Irritation-Free
Skincare

THE CHALLENGE WITH HIGH-STRENGTH THERAPEUTIC SKINCARE

Maximizing the abilities of therapeutic skincare such as AHA/BHA peels and creams require high acid concentration and low pH, conditions that may lead to side effects, such as itching, stinging, erythema, edema and discomfort.

DERMSHIELD™ A GAME CHANGING APPROACH TO HIGH-STRENGTH THERAPEUTIC SKINCARE

Using DermShield, a proprietary breakthrough approach to skincare, NOON Aesthetics empowers professional skincare providers to deliver highly effective, safe and irritation-free treatments leading to healthy & beautiful skin for all.

DermShield technology enables the use of high concentration levels of active ingredients without the risk of side effects on all skin types, all year round.

DermShield creates a temporary selective inhibitor complex:

- Temporarily and directly reducing the transmission of the skin's chemical irritation receptors
- Creating a synergistic effect leading to decreased development, incidence and severity of skin irritation and erythema
- Enabling the treatment of all skin conditions, all Fitzpatrick skin types, all year round

In a 50% glycolic acid peel, inhibiting the binding to the receptor lowers the neurogenic inflammation reaction by 95%*

*The efficacy and safety of a novel protective complex combined with 50% glycolic acid peel: a double-blinded, split face, controlled study
